

Instructions for Astra Datastax Database Connection

Step 1:

Go to the link : [Datastax](#) and click **Try For Free**. Snippet given below.

Step 2:

Page will appear as given below:

The image shows the 'Register' page for DataStax Astra DB. The page has a dark blue header with the 'DataStax' logo and a hint 'Press F11 to exit full screen'. The main content area is split into two columns. The left column is a white 'Register' form with fields for 'First Name', 'Last Name', 'Work Email', and 'Password'. It also includes social login options for GitHub and Google, an 'OR' separator, a checkbox for the DataStax MSA agreement, and a 'Create Account' button. The right column has a dark blue background with the 'Astra DB' logo, the text 'Multi-cloud DBaaS Built on Apache Cassandra™', and a list of features: 'Start in minutes. No credit card required. Up to 80 GB free monthly.', 'Build faster with REST, GraphQL, CQL and JSON/Document APIs.', and 'Deploy multi-tenant or dedicated databases on AWS, Azure, or GCP.' Below this is a section titled 'Introducing Astra Streaming Beta!' with text about the new event-streaming service.

Step 3:

SignUp by filling the details and **SignIn** after verifying the gmail or directly login using the gmail.

Step 4:

After logging in successfully, create a Database by clicking on **Create Database**.

Note: \$25 free credit is provided for every account by Datastax. Inadvertent billing will not take place because you have not provided any credit card information.

Step 5:

You will get a page as given below. Choose a suitable **Database Name** (CDS) and **Keyspace Name** (movielens), choose lowercase letters for keyspace to avoid errors.

Select **Google Cloud as Provider**. Choose Area as **Asia Pacific & Mumbai, India** as shown below. Click **Create Database**.

Create a Database

Enter the Basic Details

Database Name *

Give it a memorable name - this can't be changed later.

Keyspace Name *

Name your keyspace to reflect your data model.

Select a Provider and Region

Google Cloud
 Amazon Web Services

Area	Region
North America 0 of 1 region selected	☒ Mumbai, India asia-south1
Europe, Middle East, and Africa 0 of 1 region selected	
Asia Pacific 1 of 1 region selected	

Current Plan
Pay as you go

Read Requests	\$0.25/1M
Write Requests	\$1.03/1M
Storage	\$0.27/GB
Data Transfer	\$0.14/GB

Heads up: providers and regions can have different costs.

[Create Database](#)

Step 6:

Notice the Dashboard page as given below. **It takes a few minutes to initialize and connect.** However, you will receive mail notification after successful completion.

Credits Remaining

\$25.00

\$0.00 spent \$25.00

Ensure your databases remain active after you use your free credit.

[Add Payment](#)

Lifetime Usage

Read Requests ①	Write Requests ①	Storage Consumed ①	Data Transfer ①
0.00	0.00	0.00	0.00

Databases (1)

Name	Reads	Writes	Storage	Data Transfer	Cost	Status	
ramen	0.00	0.00	0.00	0.00	\$0.00	initializing	Connect

Classic Databases (0) ①

Name	Tier	Cost per hour	Status
------	------	---------------	--------

Step 7:

To download the Bundle file, Select the database, Go to the **Connect**, click on **Python**. Click on **Download Bundle**, a zip file named Secure Connect Bundle will be downloaded. Keep it ready to upload on colab file. **(Do not unzip)**

Step 8:

To get the credentials, Select the Organizations dropdown (on the left side panel), Go to **Organization Settings**, then select **Token Management**.

Step 9:

After selecting **Token Management**, choose **Administrator User** as **Select Role** as given in image below. Click on **Generate Tokens**. Token will be generated Copy and save the Client ID, Client Secret, and Token. Download the CSV file if needed. These credentials will be used for connecting to Cloud Database from Colab notebook.

Download Token Details

Step 10:

To upload the tables into the database, find the **upload data** on the top right corner.

Datastax Astra data loader will be launched as shown below.

Upload the csv files (movies, users, ratings available in colab) and configure.

2 Configure

Table Name

Data Preview and Types

Pick your data types from the drop downs below (the tool does its best to pick the right ones based on your data).

Userid	Movieid	Rating
int	int	int
1	1193	5
1	661	3
1	914	3
1	3408	4
1	2355	5
1	1197	3

Next

Note: If data configure fails, refresh the page and try to drag and drop the data instead of clicking and selecting the files for upload or try from incognito mode.

Select the partition keys as shown below:

Keys and Clustering

Select Partition Keys ⓘ

☐ movieid ☐ rating ☐ userid

Select Clustering Columns ⓘ

☐ movieid ☐ rating ☐ userid

Choose movieid, userid as primary keys in all the tables

Step 11:

Now going back to dashboard, you will see increase in write requests, as example shown below:

Now, you are ready to connect this database with Google Colab for querying, retrieving and analyzing the data. Please follow the instructions given in the Colab notebook.
