Mini-Project 1 - August 10 (09:00 am - 12:30 pm)

Movielens Data querying and analysis using NoSQL Database

This Mini-Project is a team activity. The Mini-Project has been released in advance i.e. on July 31, 2025, to facilitate your preparation for the activity. Each team will work in a separate Zoom breakout room for this activity. Mentor's guidance will be available during the Mini-project activity (August 10 (09:00 am - 12:30 pm)).

This is a graded **Mini-Project (10 points)**. The Problem Statement, Objective, Background, Dataset, and Steps for implementation are provided within the Mini-Project Notebook (Colab). We will be using a Cloud based Cassandra database service from DataStax for this mini-project. Please follow the instructions for DataStax account creation as given in the notebook.

Note that the tutorial session on August 02, 2025 will cover an assignment on Cassandra. Also, links are provided within the mini-project notebook to serve as helpful references. Additionally, you could refer to the Reference Links shared by *Prof. Yogesh Simmhan* for NoSQL databases (see LMS - Module: Data Engineering - Reference Links).

During the Mini-Project session, the mentor can be approached for guidance when there is difficulty in implementing specific steps. However, it is the team's responsibility to work towards the solution in the given time. Your team's solution notebook should be presented to the mentor, latest, between 11:30 am - 12:15 pm on August 10, 2025. The mentor will record the attendance of each team member and assign points to the team based on the final notebook. Each team member will receive the same points as given to the team as a whole. Absent team members will not be awarded any points.
